

# Healthy Sleep Tips

Healthy sleep habits can make a big difference in your quality of life. Having healthy sleep habits is often referred to as having good “sleep hygiene.” Try to keep the following sleep practices on a consistent basis:

1. **Stick to the same bedtime and wake up time, even on the weekends.** This helps to regulate your body's clock and could help you fall asleep and stay asleep for the night.
2. **Practice a relaxing bedtime ritual.** A relaxing, routine activity right before bedtime conducted away from bright lights helps separate your sleep time from activities that can cause excitement, stress or anxiety which can make it more difficult to fall asleep, get sound and deep sleep or remain asleep.
3. **Avoid naps, especially in the afternoon.** Power napping may help you get through the day, but if you find that you can't fall asleep at bedtime, eliminating even short catnaps may help.
4. **Exercise daily.** Vigorous exercise is best, but even light exercise is better than no activity. Exercise at any time of day, but not at the expense of your sleep.
5. **Evaluate your room.** Design your sleep environment to establish the conditions you need for sleep. Your bedroom should be cool – between 60 and 67 degrees. Your bedroom should also be free from any noise that can disturb your sleep. Finally, your bedroom should be free from any light. Check your room for noises or other distractions. This includes a bed partner's sleep disruptions such as snoring. Consider using blackout curtains, eye shades, ear plugs, "white noise" machines, humidifiers, fans and other devices.
6. **Sleep on a comfortable mattress and pillows.** Make sure your mattress is comfortable and supportive. The one you have been using for years may have exceeded its life expectancy – about 9 or 10 years for most good quality mattresses. Have comfortable pillows and make the room attractive and inviting for sleep but also free of allergens that might affect you and objects that might cause you to slip or fall if you have to get up during the night.
7. **Use bright light to help manage your circadian rhythms.** Avoid bright light in the evening and expose yourself to sunlight in the morning. This will keep your circadian rhythms in check.
8. **Avoid alcohol, cigarettes, and heavy meals in the evening.** Alcohol, cigarettes and caffeine can disrupt sleep. Eating big or spicy meals can cause discomfort from indigestion that can make it hard to sleep. It is good to finish eating at least 2-3 hours before bedtime.
9. **Wind down.** Your body needs time to shift into sleep mode, so spend the last hour before bed doing a calming activity such as reading. For some people, using an electronic device such as a laptop can make it hard to fall asleep, because the particular type of light emanating from the screens of these devices is activating to the brain. If you have trouble sleeping, avoid electronics before bed or in the middle of the night.
10. **Use your bed only for sleep and sex.** This will strengthen the association between bed and sleep. It is best to take work materials, computers and televisions out of the sleeping environment. If you associate a particular activity or item with anxiety about sleeping, omit it from your bedtime routine.

If you're still having trouble sleeping, don't hesitate to speak with your doctor or to find a sleep professional as you might have an underlying medical condition. You may also benefit from recording your sleep in a Sleep Diary to help you better evaluate common patterns or issues you may see with your sleep or sleeping habits.

*Be your best*

A good night's sleep sharpens your focus and keeps your mind agile.

*Take heart*

Cheating your sleep may lead to chronic conditions such as heart disease, high blood pressure and diabetes.

*Slim down*

Solid sleep may curb daytime food cravings and help you lose weight.

*Live longer*

People who get just enough sleep tend to live longer.

*Drive safely*

Sleepiness causes 8,000 fatal car crashes each year and half a million injuries.

*Fight sickness*

A full night's sleep aids your immune system so you're less likely to get sick.

*Study and learn*

Even a brief nap can boost the brain's ability to absorb and remember information.

*Up your game*

Peak performance on the court or field requires a good night's sleep.

*Look healthy*

New skin cells form as we sleep, and that means fresher faces in the morning.

*Stay happy*

Over time, inadequate sleep can up your risk of depression
